

NEW COURSE: COMP 310

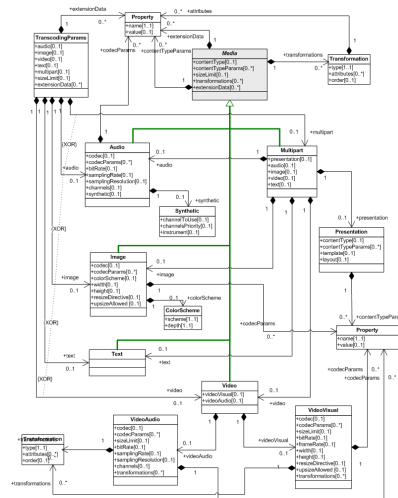

Advanced Object-oriented Programming and Design

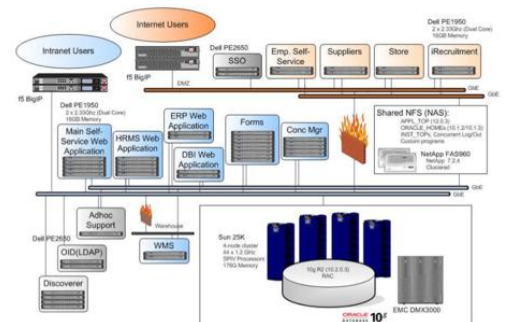

Are you interested in what it takes to make big software systems that can span the globe?

Are you ready to code something “just a little bit bigger”?

Been wondering what all those design patterns are really for?

Curious about how to make applications that can dynamically change their behavior?

Just want to know more about the dominant software paradigm in the world today?

COMP 310 will cover the state-of-the-art object-oriented programming and design techniques that make all of this possible.
