

Contents

Preface	iii
Notation	iv
1. Introduction	1
1.1 Finite Element Methods	1
1.2 Capabilities of FEA	2
1.3 Outline of Finite Element Procedures	6
1.4 Equation Assembly	15
1.5 Exercises	16
1.6 References	17
2. Mathematical Preliminaries	18
2.1 Introduction	18
2.2 Linear Spaces and Norms	20
2.3 Sobolev Norms*	21
2.4 Dual Problems, Self-Adjointness*	21
2.5 Weighted Residuals	23
2.6 Boundary Conditions Terms	28
2.7 Adding More Unknowns	30
2.8 Numerical Integration	30
2.9 Integration By Parts	33
2.10 Finite Element Model Problem	36
2.11 General Boundary Condition Choices	45
2.12 General Matrix Partitions	47
2.13 Elliptic Boundary Value Problems	49
2.14 Equivalent Forms*	54
2.15 Exercises	57
2.16 References	59
3. Variational Methods	62
3.1 Introduction	62
3.2 Structural Mechanics	63

3.3	Finite Element Analysis	64
3.4	Continuous Elastic Bar	69
3.5	Thermal Loads on a Bar *	77
3.6	Flux Recovery for an Element	80
3.7	Heat Transfer in a Rod	84
3.8	Element Validation *	86
3.9	Euler's Equations of Variational Calculus *	92
3.10	Exercises	95
3.11	References	98
4.	Element Interpolation and Local Coordinates	99
4.1	Introduction	99
4.2	Linear Interpolation	99
4.3	Quadratic Interpolation	103
4.4	Lagrange Interpolation	103
4.5	Hermitian Interpolation	104
4.6	Hierarchal Interpolation	106
4.7	Nodally Exact Interpolations *	113
4.8	Interpolation Error *	114
4.9	Gradient Estimates *	115
4.10	Exercises	118
4.11	References	119
5.	One-Dimensional Integration	120
5.1	Introduction	120
5.2	Local Coordinate Jacobian	120
5.3	Exact Polynomial Integration *	121
5.4	Numerical Integration	122
5.5	Variable Jacobians	127
5.6	Exercises	129
5.7	References	130
6.	Cylindrical Analysis Problems	131
6.1	Introduction	131
6.2	Heat Conduction in a Cylinder	131
6.3	Cylindrical Stress Analysis	138
6.4	Exercises	145
6.4	References	145
7.	Networks and Trusses *	146
7.1	Energy Networks	146
7.2	Thermal Networks	147

7.3	Electrical Resistance Networks	150
7.4	Trusses as a Network	154
7.5	Exercises	166
7.6	References	167
8.	General Interpolation	168
8.1	Introduction	168
8.2	Unit Coordinate Interpolation	168
8.3	Natural Coordinates	175
8.4	Isoparametric and Subparametric Elements	177
8.5	Hierarchical Interpolation	184
8.6	Differential Geometry *	188
8.7	Mass Properties *	192
8.8	Interpolation Error *	194
8.9	Element Distortions	195
8.10	Exercises	197
8.11	References	197
9.	Integration Methods	199
9.1	Introduction	199
9.2	Unit Coordinate Integration	200
9.3	Simplex Coordinate Integration	201
9.4	Numerical Integration	204
9.5	Typical Source Distribution Integrals *	205
9.6	Minimal, Optimal, Reduced and Selected Integration *	206
9.7	Exercises	214
9.8	References	215
10.	Scalar Fields	216
10.1	Introduction	216
10.2	Variational Formulation	216
10.3	Element and Boundary Matrices	219
10.4	Linear Triangle Element	222
10.5	Applications with Triangles	226
10.6	Bilinear Rectangulans *	251
10.7	General Elements	253
10.8	Numerically Integrated Arrays	253
10.9	Orthotropic Conduction	258
10.10	Axisymmetric Formulations	265
10.11	Torsion	271
10.12	Exercises	277
10.9	References	280

11. Vector Fields	282
11.1 Introduction	282
11.2 Displacement Based Stress Analysis	282
11.3 Planar Models	287
11.3.1 Minimum Total Potential Energy	289
11.3.2 Displacement Interpolations	289
11.3.3 Strain-Displacement Relations	290
11.3.4 Stress-Strain Law	291
11.4 Matrices for the Constant Strain Triangle	292
11.5 Stress and Strain Transformations*	307
11.6 Axisymmetric Solids*	310
11.7 General Solids*	311
11.8 Anisotropic Materials*	312
11.9 Circular Hole in an Infinite Plate	314
11.10 Exercises	321
11.11 References	329
12. Error Estimation for Elliptic Problems	330
12.1 Introduction	330
12.2 Error Estimates	334
12.3 Continuous Nodal Flux Recovery	346
12.4 One-dimensional Example Case	348
12.5 Strong Diagonal Gradient Test Case	345
12.6 Hierarchical Error Indicator	358
12.7 Flux Balancing Methods	362
12.8 Exercises	368
12.9 References	367
13. Super-convergent Patch Recovery*	370
13.1 Patch Implementation Database	370
13.2 SCP Nodal Flux Averaging	382
13.3 Computing the SCP Element Error Estimate	388
13.4 H Adaptivity	391
13.5 HP Adaptivity	391
13.6 Second Derivative Recovery	391
13.7 References	401
14. Stabilized Methods*	403
14.1 Introduction	403
14.2 Petrov-Galerkin Method	404
14.3 Geometric Measures for Stabilization Parameters	410
14.4 Review of SUPG Concepts	411

14.5	One-Dimensional Example	417
14.6	Generalizing to Higher Dimensions	421
14.7	Two-dimensional Examples	427
14.8	Execises	448
14.9	References	448
15.	Linear Flows	451
15.1	Introduction	451
15.2	Potential Flows	451
15.3	Axisymmetric Plasma Equilibria	456
15.4	Slider Bearing Lubrication	463
15.5	Exercises	468
15.6	References	468
16.	Selected Soutions	469
16.1	Introduction	469
16.2	From Chapter 2	469
16.3	From Chapter 3	474
16.4	From Chapter 4	484
16.5	From Chapter 5	494
16.6	From Chapter 6	494
16.7	From Chapter 7	494
16.8	From Chapter 8	499
16.9	From Chapter 9	500
16.10	From Chapter 10	501
16.11	From Chapter 11	502
16.12	From Chapter 12	506
16.13	From Chapter 13	506
16.14	From Chapter 14	506
16.15	From Chapter 15	507
INDEX	508

* Denotes sections or chapters that can be omitted for a first reading or shorter course.
